Preface

What types of social systems are necessary if we are to leave future generations sustainable natural environments and sustainable societies? There are various matters, such as climate change, energy issues, social security, and government debt, which need to be dealt with using a long-term perspective. At the core of these issues is conflict between the interests of different generations.

1 Resources, Growth and Sustainability

2 Climate: The Ultimate Resource

3 Renewable Resources

4 Optimal Depletion of Exhaustible Resources

5 The Sustainable Development Goals (SDGs)

6 SDGs: Ambivalences of Global Agenda

7 SDGs and Well-Being

8 Intergenerational Sustainability Dilemma (ISD)

9 Perspective of Future Generations

10 Intergenerational Sustainability Dilemma Game (ISDG)

11 Future Failures: Disruption of Carbon Cycle and Nitrogen Cycle

12 Future Design: Preferences for Sustainability

13 Future Design: Sustainable Environments and Societies

14 Futurability

15 Cooperate with Future People
